Applicant					
CSL LIMITED et al					
·					
1. This international preliminary examination report has been prepared by this International Preliminary Examining Authority and is transmitted to the applicant according to Article 36.					
2. This REPORT consists of a total of 3	sheets, including this	cover sheet.			
This report is also accompanied	by ANNEXES, i.e., shee	ets of the description,	claims and/or drawings which have been		
amended and are the basis for this report and/or sheets containing rectifications made before this Authority (see Rule 70.16 and Section 607 of the Administrative Instructions under the PCT).					
These annexes consist of a total of	of sheet(s).				
3. This report contains indications relating	g to the following items:				
I X Basis of the report		•			
II Priority					
IV Lack of unity of invention					
VI Certain documents cited	· · · · · · · · · · · · · · · · · · ·				
VII Certain defects in the int	the international application				
VIII Certain observations on	the international application				
Date of submission of the demand		Date of completion of	f the report		
22 January 2004		5 February 2004			
Name and mailing address of the IPEA/AU		Authorized Officer			
AUSTRALIAN PATENT OFFICE PO BOX 200, WODEN ACT 2606, AUSTRALIA					
E-mail address: pct@ipaustralia.gov.au Facsimile No. (02) 6285 3929		DAVID GRIFFITHS

I.	Basis of the report				
1.	With regard to the elements of the international application:*				
	the international application as originally filed.				
	X the description, pages 1 - 48, as originally filed,				
	pages, filed with the demand,				
	pages, received on with the letter of				
	X the claims, pages 49, 50, 52-55, as originally filed,				
	pages 51, as amended (together with any statement) under Article 19,				
	pages, filed with the demand,				
	pages, received on with the letter of				
	X the drawings, pages 1-10, as originally filed,				
	pages , filed with the demand,				
	pages, received on with the letter of				
	the sequence listing part of the description:				
	pages , as originally filed				
	pages, filed with the demand				
	pages, received on with the letter of				
2.	With regard to the language, all the elements marked above were available or furnished to this Authority in the language in				
	which the international application was filed, unless otherwise indicated under this item. These elements were available or furnished to this Authority in the following language which is:				
	the language of a translation furnished for the purposes of international search (under Rule 23.1(b)).				
	the language of publication of the international application (under Rule 48.3(b)).				
	the language of the translation furnished for the purposes of international preliminary examination (under Rules 55.2 and/or 55.3).				
3.	With regard to any nucleotide and/or amino acid sequence disclosed in the international application, the international				
ļ	preliminary examination was carried out on the basis of the sequence listing:				
	x contained in the international application in written form.				
	filed together with the international application in computer readable form.				
	furnished subsequently to this Authority in written form.				
	furnished subsequently to this Authority in computer readable form.				
	The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.				
	The statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished				
4.	The amendments have resulted in the cancellation of:				
	the description, pages				
	the claims, Nos.				
	the drawings, sheets/fig.				
5.	This report has been established as if (some of) the amendments had not been made, since they have been considered to go beyond the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2(c)).**				
*	Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this				
**	report as "originally filed" and are not annexed to this report since they do not contain amendments (Rules 70.16 and 70.17). Any replacement sheet containing such amendments must be referred to under item 1 and annexed to this report				

v.	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations
ļ	and explanations supporting such statement

1.	Statement		
	Novelty (N)	Claims 1 - 27	YES
		Claims	NO
	Inventive step (IS)	Claims 1 - 27	YES
		Claims	NO
	Industrial applicability (IA)	Claims 1 - 27	YES
·		Claims	NO

2. Citations and explanations (Rule 70.7)

The present invention relates to methods for designing candidate polypeptides for expression in a suitable host comprising identifying at least one hydrophobic peptide sequence and arranging or re-locating at least one of the identified sequences to generate a polypeptide with reduced amplitude in hydrophobicity and/or length of any hydrophobic regions. Specific polypeptide sequences and vaccines are also claimed.

This report is based on the following citations:

- D1. US 6,070,126;
- D2. WO 2000/063693;
- D3. Molecular Immunology (1996), vol. 33, no. 2. pp. 145-155;
- D4. WO 2001/047541;
- D5. WO 1996/003144; and
- D6. WO 1997/005164.

US 6,070,126 describes the identification of protein epitopes of optimal length characterised by a hydrophobic-hydrophilic-hydrophobic motif. The citation does not teach or suggest the arranging or re-locating of sequences to generate a polypeptide with reduced amplitude in hydrophobicity and/or length of any hydrophobic regions and so the present claims must be acknowledged as being novel and inventive over this citation.

WO 2000/063693 also describes the identification of protein epitopes characterised by a hydrophobic-hydrophilic-hydrophobic motif. The citation does not teach or suggest the presently claimed invention and so the present claims must be acknowledged as being novel and inventive over this citation.

Molecular Immunology (1996), vol. 33, no. 2. pp. 145-155 discloses the statistical comparison of established T-cell epitope predictors against antigen databases to discover which predictors are statistically relevant. The present claims must be acknowledged as being novel and inventive over this citation.

WO 2001/047541 relates to methods of designing polyepitopic vaccines comprising multiple HLA epitopes to provide increased immunogenicity by sorting the multiple HLA epitopes to minimise the number of junctional epitopes (epitopes created by the juxtaposition of two other epitopes. The citation does not teach or suggest the presently claimed invention and so the present claims must be acknowledged as being novel and inventive over this citation.

WO 1996/003144 discloses a recombinant cytotoxic T lymphocyte vaccine comprising at least one recombinant protein including a plurality of epitopes from one or more pathogens wherein the protein is substantially free of sequences naturally found to flank the cytotoxic T lymphocyte epitopes. The citation does not teach or suggest the presently claimed invention and so the present claims must be acknowledged as being novel and inventive over this citation.

WO 1997/005164 discloses a papillomavirus polyprotein construct comprising at least two sequences of an early ORF protein of papillomavirus fused together either directly or indirectly. The citation does not teach or suggest the presently claimed invention and so the present claims must be acknowledged as being novel and inventive over this citation.

All claims meet the criterion of being industrially applicable.
